* - Exit Menu's

Doorbell Wiring

HOW TO...Set Authorization-card operation (Zone 1/Relay)

Note: Authorization-card is also called header card, it authorizes users. By default, users can operate properly, you can use an Authorization-card when you need to restrict user access.

The Authorization Cards must be Ordered separately and do not come with the ACKPWB6K

- These Cards would be either EM or HID Format and could be any Site Code or User No.
- These Cards once enrolled would not open the Lock when presented.

To Activate follow the steps below,

Press and Hold * for 2-3 Sec's until Red LED Flashes

<Enter>Admin Password #

015#<Read Card> <Read Card><Read Card> (Max 3 Cards for this Operation)

Note: If only one Authorization Card is required, simply read 1 Card and Exit programming

* - Exit Menu's

5.2 Single-door mode management menu summary table

Way to enter menu : * (Hold down for more than 2 seconds), (Admin password) #			
Menu	Parameter or operation step	Function	Default value
00	(New Admin Password) #, (Repeat new Admin Password)	Change admin password	888888
	(8 digits) #	Set Super-open-password	
	0000#	Delete Super-open-password	
01	0#, read card, read card, ...	Set 1-3 Set-cards.	
	1#, read card, read card, ...	Set 1-3 Add-cards.	
	2#, read card, read card, ...	Set 1-3 Delete-cards.	
	3#, read card, read card, ...	Set 1-3 Super-open-cards.	
	4#, read card, read card, ...	Set 1-3 Anti-duress-cards.	
	5#, read card, read card, ...	Set 1-3 Authorization-cards.	
	6#, read card, read card, ...	Set 1-3 Normal-open-cards.	

To test this function, you would have existing PIN CODE or Card Users working on the Keypad.

If you present the Authorisation Card the Keypad will respond with 2 Short Beeps to Lock Users out

When you present the Authorisation Card a second time the Keypad will respond with one long beep, this will Unlock all users to access keypad again. Both PIN and Card Users.

NOTE: The only Code to work in this Mode is the Super Open User
